

Muhammed Metehan Yıldırım

Front-End & Mobile Developer

📍 İstanbul / Türkiye | 📞 +90 551 150 8282 | ✉️ muhammed.metehan.yildirim@gmail.com | 🔗 <https://metehan-yildirim.com>

Professional Summary

With my experience at Gonca Grubu Software, I have specialized in developing interactive mobile applications, especially for the hospitality industry. I am proficient in HTML5, JavaScript, and Ionic technologies, and successful in designing user-friendly interfaces and developing modern, easy-to-use web panels using React.js. My strong problem-solving skills ensure successful project outcomes and enhance user engagement.

Experience

Gonca Grubu Yazılım Ve Bilgisayar Sistemleri Ltd. **September 2018 - Present**
Front-End & Mobile Developer
Kağıthane / İstanbul / Türkiye
For Hotels

- Employee tracking mobile app.
- Interactive mobile app for guests.
- Web admin panel for managing mobile applications.
- AI assistant solutions.

Projects

LUCY **2017-Present**
AI Assistant

Inspired by J.A.R.V.I.S. from the Iron Man movie series, initially built using C# and switch-case logic for basic actions (e.g., turning on/off a desk lamp, searching specific terms on Google). Now migrated to Python, the assistant can partially conduct content research and provide short summaries thanks to neural networks.

MOBEX **2018-2024**

A dynamic mobile application that adapts its content based on backend data. Designed for hotel guests to easily participate in activities and access various services.

StorMIC **2026-Present**
Serverless, P2P Voice & Video Chat App

Built in response to Discord being banned in Turkey, a peer-to-peer (P2P) voice, video, and text chat application that requires no account or sign-up. Messages, voice, and files never touch a server, flowing directly between participants instead. The client is built with Electron and WebRTC, the signaling server with Node.js and WebSocket; fully open source (github.com/MMetehan/StorMIC).
